

## **CARBON MANAGEMENT POLICY**

Network Installation Solutions Ltd (NIS Ltd) understand travelling on road has a significant environmental impact. Petrol and diesel fuel all release carbon dioxide which contributes to climate change, to this end NIS Ltd have taken effective measures to reduce carbon emissions where possible and practicable.

As a result NIS Ltd will:

- Install vehicle tracking devices to monitor vehicle use-age and remove excessive travelling
- Where practicable ensure engineers are to car share when travelling to major projects in large numbers
- In every case look to book the closest accommodation to a site to reduce travelling distance and petrol consumption
- Ensure engineers are to use Shell 'fuel save' diesel only
- Encourage the use of walking, public transport or car sharing for all office based staff, applying to both office employees and directors alike
- Ensure computer equipment is turned off when not in use
- Where practicable create a 'paperless office environment' through the use of email and on screen reading and the use of printing documents only when absolutely necessary
- Re-use packaging and boxes to delivery and storage where practicable

A handwritten signature in black ink, appearing to read 'DW', is positioned above the printed name of David Wainwright.
